

## Child Information Sheet

Cefalexin for UTIs – Right treatment Length in Young children

We would like to ask you and your family  
if you would take part in a study called CURLY

---

### WHAT IS CURLY?

A study to find the best way to help children that are poorly  
because they have a wee infection

---

### WHY ME?

We are asking lots of children that feel poorly like you

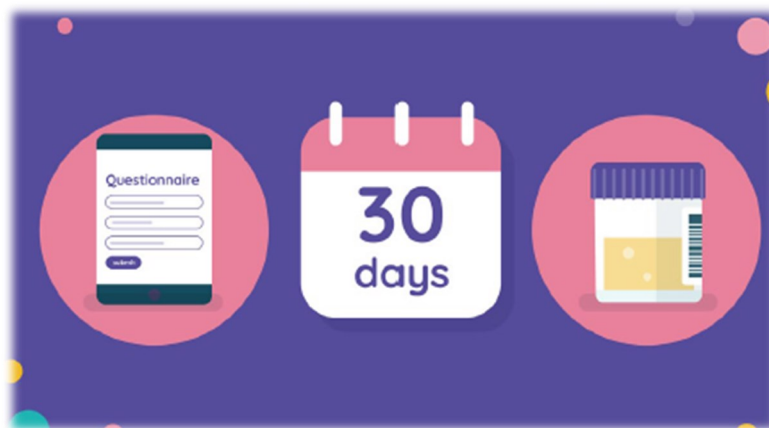

## WHAT DO I HAVE TO DO?

Your doctor will tell your parents how many days you need to take your medicine

After 16 days, you will come back to the hospital to make sure you are feeling better. We will ask you to collect some wee in a pot

After 30 days you will answer some questions at home and give another pot of wee to your parents

## DO I HAVE TO SAY “YES”?

No, you don't

If you say yes, you can still change your mind

---

## WHAT DO I DO NOW?

Talk with your family and nurses to answer any of your questions

---

Thank you for reading this leaflet
